

2015/2016 Tire-Derived Aggregate Grant Program

Salinas Valley Recycles installed nine (9) horizontal landfill gas wells at Johnson Canyon Landfill using Tire Derived Aggregated (TDA) as backfill. This project resulted in diversion of 74,900 California-generated waste tires from the waste stream, of which 72,486 remained on site from previous CalRecycle 2012/13 TDA Grant Program, and 2,414 that were newly diverted.

Funded by a grant from CalRecycle
